

I am against restriction of A3E and J3E bandwidth on the amateur bands.

This would limit the experimentation and growth of new communications technologies, such as digitally defined radios, as well as the current development of high efficiency Class E/PDM AM.

For the most part the Amateur community is still self policing. Restrictions would limit the ability to experiment and develop new methods of communicating. As the number of Amateur Radio operators decline, we need all the technical attraction we can get, so we can help train operators for technical careers and Homeland Security.

Thank you,
Dan Brown
